EDUCATION

Purdue University | West Lafayette, IN

May 2028

Computer Science + Math

Thomas Jefferson High School for Science & Tech | Alexandria, VA

June 2025

Relevant Courses: Machine Learning, Computer Vision, Artificial Intelligence, Multivariable Calc, AP CS + Data Structures

SKILLS

Languages: C++, Go, Java, Javascript, Python, Rust

Technologies: AWS, Docker, Git, Kubernetes, Node.js, Pandas, React.js, Scikit-Learn, Sveltekit, TensorFlow

Interests: Hiking, Climbing, Soccer, Wrestling

WORK EXPERIENCE

partipix | Arlington, VA | Founder

March 2025 - July, 2025

- Created a **photo sharing platform** supporting 10,000+ images per event with a Python-based facial recognition pipeline (OpenCV + pre-trained CNN) for **automatic tagging** and categorization. Achieved **~93% accuracy** on face recognition.
- Implemented **Google OAuth 2.0** authentication, **blacklist-based** privacy enforcement, and cloud-backed storage with **real-time upload tracking** (<200ms latency) through a mobile-responsive **React.js frontend**.

Havaya | South Sterling, PA | Camp Counselor

June 2024 - August 2024

- Supervised and mentored groups of **10–15 campers** around 10 years old; **planned and led daily activities** to develop teamwork, creativity, and outdoor skills. Organized **large-scale events** twice a week for **80+ campers**.

safekids.ai | Fairfax, VA | Software Engineering Intern

May 2023 - August 2023

- Built and **maintained backend services** for a child online safety platform; **optimized MITM proxy** for real-time network analysis; updated backend dependencies to **eliminate security vulnerabilities** and **improve system resilience**.

PROJECTS

WeTrade | Go, Python, HTML/CSS (React.js)

September 2024 – May 2025

- Built a fully autonomous stock trading bot leveraging **large-scale news scraping**, real-time **sentiment analysis**, **LSTM-based forecasting**, and technical indicators. Created a website to interact with the bot and modify the portfolio.
- Engineered custom scraping infrastructure capable of **processing 50,000+ Yahoo Finance articles per minute** using **IPv6 proxy networks**, enabling training data accumulation for the model to make decisions based on **historical data**.

Auditory-InSights | Python, Hardware Integration

December 2023 – February 2024

- Developed **augmented reality glasses** that **visualize audio cues** (such as fire alarms and sirens) for **deaf users**, allowing them to sense danger. Integrated **real-time sound localization and visualization** using Python and custom hardware.
- Designed and built a lightweight **wearable system** with a **directional microphone array**, custom **PCB**, and transparent **OLED display**, achieving **sub-100ms latency** for on-device sound detection and AR overlays.

WeCode | Go, Python, HTML/CSS

March 2024

- Created an AI-powered **educational website** specializing in **programming**, delivering **personalized lessons**, assignments, and **real-time feedback** to users. Was able to completely change course curricula based on hobbies / **interests of students**.
- Built and deployed a full-stack web app with a Go backend and Python-based AI models, enabling interactive coding exercises and progress tracking.

CRIMSON | Python, HTML/CSS

November 2023 - January 2024

- Built a **predictive modeling** system using **historical crime data** from Washington, D.C. to forecast high-risk locations and times, improving patrol route planning with sector-level alerts. Used 20+ years of data to achieve 84.2% accuracy.
