EDUCATION

Purdue University | West Lafayette, IN

Gpa: 3.6 May 2028

Computer Science + Math, Minor: Business

Thomas Jefferson High School for Science & Technology | Alexandria, VA

Gpa: 4.2 June 2025

WORK EXPERIENCE

Canopy Connect | Remote | Software Engineer

April 2026 - Current

- Built and maintained **production integrations** for consumer-permissioned insurance data access across **100+ carriers**.
- Built **monitoring, alerting, and regression testing** that improved **integration reliability** and **reduced time-to-recovery** for upstream breakages.
- Designed **authentication** and session-management systems for **long-lived third-party account connections at scale**.

Freelance Reverse Engineering | Remote

May 2025 - August 2025

- Reverse engineered web **JavaScript anti-bot** systems by **deobfuscating code**, transforming **abstract syntax trees (AST)** with **Babel**, and bypassing **dynamic integrity checks** to automate interactions and build large-scale scraping pipelines.
- Performed reverse engineering of **native Android applications** with JNI obfuscation. Used **Frida**, and dynamic analysis to uncover internal APIs, **bypass integrity checks**, document system behavior, and find **vulnerabilities**.

safekids.ai | Fairfax, VA | Software Engineering Intern

May 2023 - August 2023

- Built and **maintained backend services** for a child online safety platform; **optimized MITM proxy** for real-time network analysis; updated backend dependencies to **eliminate security vulnerabilities** and **improve system resilience**.

PROJECTS

Whoopmaxx | Go, HTML/CSS

December 2025 - January 2026

- Built and shipped whoopmaxx, an app that **talks directly to a WHOOP strap**, replacing the vendor's cloud app entirely.
- Reverse-engineered the **strap's BLE protocol** to pull recorded **history, live heart rate, and beat-to-beat intervals**, packaged as a **standalone StrapProtocol module** with no vendor code or assets.
- Implemented **on-device sleep staging** (wake/light/deep/REM) and AASM-style metrics: **efficiency, WASO, REM latency**, stage minutes, from **heart rate, motion, and RR intervals**, scored against baselines learned from the **user's own history**

PredictionEdge | Go, HTML/CSS

December 2025 - January 2026

- Built a low-latency **prediction market arbitrage system** in Go that maintains live WebSocket connections to multiple exchanges, **canonicalizes equivalent markets**, and **computes real-time arbitrage margins** with sub-100ms latency.
- Engineered a concurrent pipeline processing **thousands of order book updates per second**, filtering opportunities by **liquidity, fees, and slippage**, and driving **automated trade placement** logic on high-confidence edges.

WeTrade | Go, Python, HTML/CSS (React.js)

September 2024 - May 2025

- Built a fully autonomous stock trading bot leveraging **large-scale news scraping**, real-time **sentiment analysis**, **LSTM-based forecasting**, and technical indicators. Created a website to interact with the bot and modify the portfolio.
- Engineered custom scraping infrastructure capable of **processing 50,000+ Yahoo Finance articles per minute** using **IPv6 proxy networks**, enabling training data accumulation for the model to make decisions based on **historical data**.

Auditory-InSights | Python, Hardware Integration

December 2023 - February 2024

- Developed **augmented reality glasses** that **visualize audio cues** (such as fire alarms and sirens) for **deaf users**, allowing them to sense danger. Integrated **real-time sound localization and visualization** using Python and custom hardware.
- Designed and built a lightweight **wearable system** with a **directional microphone array**, custom **PCB**, and transparent **OLED display**, achieving **sub-100ms latency** for on-device sound detection and AR overlays.

SKILLS

Technical Languages: C++, Go, Java, Javascript, Python, Rust

Languages: English, Spanish
